

Amendments to the Claims:

*This listing of claims will replace all prior versions, and listings, of claims in the application:*

1. (currently amended) An apparatus for positioning a window ~~in a vehicle having a mounting surface~~, the apparatus comprising:

a lift mechanism ~~disposed on the mounting surface~~, the lift mechanism configured to move ~~the window~~ between a raised position and a lowered position and having a guide track ~~configured to be attached to the mounting surface~~, a carriage movably coupled to the guide track, and a link connected to the carriage at a lower end and adapted to be connected to the window at an upper end; and

~~a strut having a first end disposed on the vehicle and a second end adapted to engage the window;~~

~~wherein the~~ a strut that helps bias ~~biases the lift mechanism window~~ toward the raised position.

2. (currently amended) The apparatus of claim 1 wherein the strut is attached to a ~~the~~ first window bracket and a second strut is attached to a second window bracket.

3. (currently amended) The apparatus of claim 1 ~~[[2]]~~ further comprising a first window bracket, ~~bracket connected to the window~~ wherein the link and the strut are pivotally connected to the first window bracket.

4. (currently amended) The apparatus of claim 1 ~~[[2]]~~ wherein the carriage further has a roller for engaging the guide track.

5. (currently amended) The apparatus of claim 1 ~~[[2]]~~ wherein the guide track has a plurality of external surfaces and the carriage has a plurality of rollers, the plurality of rollers configured such that at least one roller engages each external surface of the guide

track.

6. (currently amended) The apparatus of claim 4 ~~[[2]]~~ wherein the carriage further has first and second sides, the roller being disposed proximate the first side and the link being disposed proximate the second side.

7. (currently amended) The apparatus of claim 1 ~~wherein the window further has a first layer and a second layer~~ further comprising an actuator for moving the lift mechanism.

8. (currently amended) The apparatus of claim 7 further comprising first and second cables that extend between the actuator and the carriage ~~wherein the first layer includes a projection that extends past the second layer, the projection including a narrow portion adapted to slide within a channel disposed on the vehicle.~~

9. (currently amended) An apparatus for positioning a window ~~disposed in a closure of a vehicle, the closure including a channel for receiving a portion of the window and a mounting surface,~~ the apparatus comprising:

a guide track ~~configured to be attached to the mounting surface;~~

a carriage having a plurality of rollers adapted to engage the guide track;

a link connected to the carriage at a first end and pivotally connected to a first window bracket at a second end; and

an actuator for moving the carriage along the guide track;

wherein the plurality of rollers roll along the guide track to move ~~the window~~ between a raised position and a lowered position.

10. (original) The apparatus of claim 9 further comprising a first strut attached to the first window bracket and a second strut attached to a second window bracket.

11. (currently amended) The apparatus of claim 9 wherein the guide track

has a plurality of external surfaces and the carriage has a plurality of rollers, the plurality of rollers configured such that at least one roller engages each external surface of the guide track  
~~window includes a plurality of layers.~~

12. (currently amended) The apparatus of claim 11 wherein multiple rollers engage each side of the guide track ~~the window includes first and second layers, the first layer including a projection that extends past an edge of the second layer.~~

13. (currently amended) The apparatus of claim 9 ~~[[12]]~~ wherein the carriage includes at least one flange that pivotally receives the link ~~projection further comprises a narrow portion configured to slide within the channel.~~

14. (currently amended) The apparatus of claim 13 ~~[[12]]~~ further comprising a carriage pin that pivotally connects the carriage to the link ~~an edge treatment disposed proximate the edge of the second layer and configured to inhibit moisture intrusion between the plurality of layers.~~

15. (currently amended) An apparatus for raising and lowering a window disposed in a door of a vehicle, ~~the door having a door body~~, the apparatus comprising:

a guide track ~~configured to be attached to the door body~~;

a carriage including a plurality of rollers, the rollers being configured to engage the guide track;

a link pivotally attached to the carriage at a first end and adapted to engage the window at a second end;

a window regulator assembly adapted to move the carriage between a raised position and a lowered position; and

a strut attached to the ~~door body~~ at a first end and adapted to engage the window at a second end;

wherein the strut is configured to help bias the window regulator assembly toward the raised position.

16. (original) The apparatus of claim 15 wherein the plurality of rollers are configured in pairs such that pairs of rollers are disposed on opposing surfaces of the guide track.

17. (original) The apparatus of claim 15 wherein the link is pivotally attached to the carriage by a pin.

18. (currently amended) The apparatus of claim 17 further comprising a window release assembly, the window release assembly including a release cable attached at an end to the pin, wherein application of sufficient force on the release cable disengages the pin and allows ~~the window to move~~ movement of the link independent of the carriage.

19. (original) The apparatus of claim 18 further comprising a release cable guide, the release cable guide disposed proximate the strut and including a passage through which the release cable passes.

20. (currently amended) The apparatus of claim 15 ~~[[18]]~~ further comprising ~~an aperture disposed in the door and a locking pin configured to be inserted in the aperture, wherein insertion of the locking pin inhibits movement of the window.~~
